Integrity Flags

0 Integrity Flags for Review

Our system's algorithms look deeply at a document for any inconsistencies that would set it apart from a normal submission. If we notice something strange, we flag it for you to review.

A Flag is not necessarily an indicator of a problem. However, we'd recommend you focus your attention there for further review.

1 Assignment Due Date: Sunday, January 19, 2025

Assignment Submission Date: Sunday, January 19, 2025

I confirm that I understand my coursework needs to be submitted online via MySecondTeacher under the relevant module page before the deadline in order for my assignment to be accepted and marked. I am fully aware that late submissions will be treated as non-submission and a marks of zero will be awarded.

Acknowledgment

5 We, the group of N8 would like to express gratitude to the following for their support in completing this project on web development:

Islington College, for providing opportunities to express our style on e-commerce platform and showcase our unique ideas.

Rabina Lama, with other lectures to be a guide to a roadmap to the goal.

3 Online resources and the internet for providing a wealth of information that greatly contributed to this project.

This project would not have been possible without the help and support of these individuals and resources. Thank you

CSS FOR THE HTML 72

JAVASCRIPT FOR THE HTML 94

Chapter 1: Introduction

Introduction of Proposed Project

From selling goods and service physically to evolving digitally, the platform has changed drastically. Focusing on watch industry, our team has created a website with five interconnected web pages, each offering unique features and content. The main objectives are to use HTML and CSS effectively to create a website that is both functional and visually engaging, with a strong focus on user-friendliness and a seamless browsing experience.

Aims and Objectives

Aim: To have any Aims and objectives. First of all, we need problems. So, we found that in e-commerce on watch-industry, one of the main problems that highlights is counterfeiting – it is a way of creating a duplicate of the product, moreover, an item used by someone without their permission. So, our aims are to create a website which help users to know about the real trademark of the watch- industry. And give fully-support to the producers for their hard works.

Objectives:

Design 5 distinct pages: Home, Shop, Blog, About Us, Watches

Including on one page about the real authorized maker for their work

Honouring the Integrity

Appreciating genuine effort and craftsmanship of the original maker

Tools:

balsamiq:

To create a wireframe for web development.

Visual Code:

To transform web design into real web-page.

Language:

Using HTML, CSS and JavaScript.

Image editor:

To edit the image.

Verdict

This report includes the tools used to create a website and a motivation to create it from real time problems that are currently being faced.

Chapter 2: Wireframes

Wireframes are the design that helps in guiding the process of development. In our team, wireframe was the strongest pillar to hold. First of all, we design the wireframe by discussing how it's going to look and after the work done which took around seven to eight days. Despite, the time running short, we decided to make it as simple as

possible.

Wireframe 1: Home Page

The home page is the main entry point for a user. As seen in the picture below, we had a simple and easy way to design a website from the navigation bar to the top leading to various pages. Likewise, in the footer section, we added navigation to link to various pages. On the home page, we have uploaded 5 images. The images are to showcase the watch's collection on top of the table. Second, to show how watches fit people's looks. And, other images are the watches to the customers.

The three tables the a few cm below the first image, we have presented the introduction to our website, such as, why choose from our website? The simplest answer is, that we have an authorized certificate from the company to sell these watches.

The official store and the company are also mentioned. We have added the names of brands because our main objective was to remove the counterfeiting.

And we also provide a few watches, that many customers prefer with the prices and detail. And also, the newsletter box, where many customers can subscribe to our newsletter and stay connected. Also, brief preview about what our customer had replay from purchasing from our shop.

FIG:1 wireframe of home page

Wireframe 2: Product page

Fig: Wireframe for Product page

As for the website, we have changed the name of the product page to the shop page. Because we want customers to feel like they are shopping. In the above wireframe, we added a picture of our collection (pictures are generated from AI 1). And, in between small descriptions of our brands.

And, we have added only the authorized company watches like Audemars Piguet, Rolex, Richard Mille, and Patek Philippe. These are some of the top brand watch companies. Below their name, we added the watch's image with purchase – one-click purchase. And, view details button to showcase the specifications of watches.

Dispute, the header and footer remain the same on overall pages.

Wireframe 3: Blog Page

According to wix.com, the blog is combined from “web” and “log”. Also, blogs are the type of online diary that share insight into a certain topic. It also mentioned how the

evolution of writing from just a newspaper or article to written sharing different knowledge and ideas has come to an online platform and central position in digital content.

Having the concept of the blog in mind, our team has researched the specific topic-related material of watches. The watches how it has evolved from marketing in person-to-person, to digital. Our team members, Raghav and Suvash went onto the internet to find more. As the role was up to them,

As shown in the wireframe, Our team members, Raghav and Suvash, planned out the overall simpler to explain about blog. It includes a title with a short explanation and another title for further explanation. Lastly, the overall conclusion to how technology has shaped the watch- industry

2 Fig: Wireframe of blog page

Wireframe 4: About Us Page

Fig: Wireframe of About Us Page

About Us page, described by Shopify is a section on a website that helps users to know about the company, organization, or individuals.

In Wireframe, We had a bit of a problem getting to structure how the page was going to be. As light sparks in the darkness, Nitisha, one of our team members, gave us an idea to shape it more convergently. She focuses on uploading images in two shapes. And sort out to have a feedback page. Also, she added a separate page for our portfolio about CV.

Not only that, but she also gave us ideas about feedback. On how one can feedback according to our role. So, in the wireframe, it can be seen that it has a feedback form just below our profile. It includes Name and email with a rating on how our team performs in the radio button and a positive message with an improvement message for us.

2 Wireframe 5: Contact Page

2 Fig: Wireframe of Contact Page

The contact page is a part of a website that helps in communicating with the company, organization, and individual to improve and stick together. From our team, we believed that the contact page should be much more compactible and easier to get. Because, finding the contact page can be hard sometimes on the popular page, whereas our website has a simple method and one- click.

The Wireframe of the contact page includes a name with a text box, the same for email and message. It gives us a sense of more improvement opportunities to grow bigger and stronger.

Wireframe 6: Research Page

According to researchmethod.net, Research is a detailed academic document that presents the study results to investigate. It is like writing in a paper requiring the following a structured format to more clarity.

In the wireframe, Our team held together to get into to finish the page as soon as possible. First, we wanted to declare the page differently, so we added a background of colors with some titles to get along with a bit of a small message.

Then, as we design the overall page, we need to add the references, and that adds up to ten. Both include the reference page with our page. So, this shows how we have uniquely modified and given credit to the original content. We have also provided the Section below making a table of 3, and links from where we have taken.

Figure: Wireframe of Research Page

Chapter 3: Our Page

1. Home page

Figure: Final Home page

This is our result of the home page. In comparison to the wireframe, we have included the mentioned images and the bars in their proper place.

We were, inspired by the W3school website, on how the main page should look like. For instance, in W3school website, has a “Learn to code” as the central focus. We want the central focus on watches.

Nischal, one of our team members put effort into designing and getting the home page set up. He has generated lots of ideas on how the user view-explaining about different points of view aspect.

2. Product page

Figure: Final Product Page

In our shop page, and product page, we have a bit changed the name because our customer feels like a traditional shop when they enter the digital also.

In the wireframe, we tried to implement it as close to the wireframe. Even though our knowledge doesn't reach the real professional development stage. At least, we tried our best to do it.

We want to give full credit to Richard Mille because as we were visiting its page in the product section we found the images were lined up in 4 sections, but we tried to have a similarity but we failed. We were inspired by the features it has used. 3. Blog Page

3. Blog Page

Figure: Final Blog page

As mentioned above, we want to make our blog as simple as possible. So, our team member, Raghav, and Suvash put their effort into generating the content from the internet.

Our blog page looks like more over research page, in the A4 size paper. We want the page to become a clear way to communicate.

4. About us page

Our About Us page features the feedback form at the bottom. It has javascript implementation on the alert and the submission button is clicked. And our team have various roles involved with the hyper-link involved in their view portfolio, which it directly

Figure: Result About us Page

to respective CV.

In another section Cv, every time members' roles are included with their respective positions. As it also highlights their skills, education, and experience.

5. Contact Page

The contact Page includes the name, email, and Message. It has specific features that give us an alert with the message shown below the submit, thanking the submission with the user's name.

Figure: Result of Contact Page

6. Research Page

Figure: Result of Research Page

We have added the reference from various websites and included the link under its links. Also, the images have the hover effect. so when you cross the cursor into images, it hovers towards us.

And, we have a section that includes the component which we have reference from and how we implement it.

Header section

- In the header section, we have added a hover effect in the text. As we move the cursor to the navigation bar in tabs, the tabs change colour

Figure: The header

Footer section

Figure: The footer

- Shows the emoji of our location, and email provided, and also it includes the navigation bar sided to the footer. With the copyright reserved.

Conclusion

Throughout the coursework, we were stressed about how our final result would be, but we took one step at a time. We eventually got to a stage where our project had better than expected. Before developing the website, we researched online about various watches and overlooked the websites. And, we use VS-CODE as our code editor, usually, it has to stress us out. First, to make a website we design Balsamiq to look overall outer-sketch.

In group course, we divided into equally among 4 members. Some outlined objectives, and design, to counter one problem in real-world examples, and the majority was focused to simple uses.
